# Costs of Production for Major U.S. Crops, 1975-87

Robert McElroy Mir Ali Robert Dismukes Annette Clauson AD-33 Bookplate

#### NATIONAL

### Want Another Copy? It's Easy.

Just dial 1-800-999-6779. Toll free.

Ask for Costs of Production for Major U.S. Crops, 1975-87 (AGES 89-22).

The cost is \$8.00 per copy. For non-U.S. addresses, add 25 percent (includes Canada). Charge your purchase to your VISA or MasterCard, or we can bill you. Or send a check or purchase order (made payable to ERS-NASS) to:

ERS-NASS P.O. Box 1608 Rockville, MD 20850.

We'll fill your order via 1st class mail.

#### Can You Use an Electronic Database?

An electronic database containing the statistics in this report is also available. The database is in the form of Lotus 1-2-3 (Release 2) worksheet files on three, 5.25," MS-/PC-DOS compatible diskettes. The database costs \$45.

Write to the above address and ask for *Costs of Production*, 1975-87 (order #89025). Or use our toll-free number, 1-800-999-6779.

For further information on this database, write Bob McElroy, Room 937, 1301 New York Avenue, NW, Washington, DC 20005-4788 or phone 202-786-1800.

Costs of Production for Major U.S. Crops, 1975-87. By Robert McElroy, Mir Ali, Robert Dismukes, and Annette Clauson. Agriculture and Rural Economy Division, Economic Research Service, U.S. Department of Agriculture. Staff Report No. AGES 89-22.

#### Abstract

USDA's costs-of-production (COP) data series dates back to 1975. This report is a compilation of these costs for the history of the COP project. Thirteen major field crops are included, with costs of production at both the national and regional level. The budgets correspond to those published annually by the Economic Research Service (ERS) in Economic Indicators of the Farm Sector: Costs of Production.

**Keywords:** Costs of production, costs and returns, crops, enterprise budgets

1301 New York Avenue, NW. Washington, DC 20005-4788

# Costs of Production for Major U.S. Crops,1975-87

Robert McElroy Mir Ali Robert Dismukes Annette Clauson

#### Methodology

USDA's costs-of-production (COP) data series dates back to 1975. Since then, the number of enterprises has been expanded and the methodology has been improved. This report is a compilation of these costs for the history of the COP project. Eleven major field crops are included, with costs of production at both the regional and national level. The budgets correspond to those published annually by the Economic Research Service (ERS) in Economic Indicators of the Farm Sector: Costs of Production.

ERS gathers COP data through producer surveys. The agency conducted its first Cost of Production Survey (COPS) in 1978, covering all major field crops in the major producing States. It focused primarily on the physical inputs used on the crop (for example, seeding rate, pounds of fertilizer, machines used in the field, and the times over for each field operation). Prices for these inputs and engineering relationships among operations were added from other sources to give a cost for each input per planted acre of the crop. The survey was repeated in 1982 and 1983. Between the survey years, prices were updated to derive annual COP estimates.

For the 1984 production year, ERS instituted the Farm Costs and Returns Survey (FCRS), replacing the COPS. The FCRS is a full-probability, random sample of producers that collects not only COP data, but also whole-farm financial data. The COP questions in the FCRS still focus on physical inputs, but costs for overhead and interest, which are not enterprise specific, can be more accurately estimated with the whole-farm data.

The FCRS is an annual survey of about 26,000 farmers and ranchers, but due to budget constraints not every COP commodity is surveyed every year. Rather, each commodity is on a 4-year rotation. Between survey years, prices are updated for new production costs as was done before 1984. The annual costs in this report, then, represent various production years, depending on the survey year. For example, all costs for 1975-80 are based

on the 1978 COPS. Costs for 1981-87 come from different years depending on the crop:

Commodity	Production year	<u>Commodity</u>	Production year
Corn	1982 & 1983	Soybeans	1986
Sorghum	1986	Sunflowers	1986
Barley	1982 & 1983	Peanuts	1982
Oats	1983	Flaxseed	1983
Wheat	1986	Cotton	1982
Rice	1984	Sugar beets	1980 & 1984
		Sugarcane	1980 & 1984

COP budgets published by the U.S. Senate prior to Economic Indicators of the Farm Sector: Costs of Production, 1982
(December 1983) were in a different format than is used today. They consisted only of cash expenses and capital replacement, with three different land charges. The current COP format adds a value of production (to allow estimating net returns) and opportunity costs of the producer's owned inputs (unpaid labor and the costs of using capital for farming rather than in some other investment).

To make the 13-year series consistent between years, ERS has made some adjustments to certain of the individual inputs. For example, before 1981, technical services like soil testing were included in custom operation costs and not listed separately. This category and another for miscellaneous could not be broken out for most crops prior to 1981. The other variable cash expenses are identical for all published budgets. For items like overhead and interest, early budgets used different data sources and methods. The overhead and interest expenses in this report are derived from more current data and supersede any earlier published estimates (pre-1982 reports). For sunflowers, sugar beets, and sugarcane, data were not collected for some of the early years and are not currently available.

For all costs except "miscellaneous" and "technical services," the current methodology and data sources have been backdated to provide a consistent series. In the case of "taxes and insurance," there is a jump between 1979 and 1980 where real estate tax data did not match precisely, particularly in the budgets covering the Corn Belt and Lake States regions.

For a complete description of definitions and methods, see <a href="Economic Indicators of the Farm Sector: Costs of Production">Economic Indicators of the Farm Sector: Costs of Production</a>, 1987.

#### COP Estimates Prior to 1975

Cost-of-production budgets prior to 1975 consistent with current USDA definitions and methods are not available. Many States, however, have similar COP projects for the major crops grown in

their particular State. Using one of these State budgets, particularly with respect to variable cash expenses, would probably provide an acceptable proxy. Choosing a State that is a major grower of the crop (for example, Kansas for wheat, Iowa or Illinois for corn and soybeans, or Texas for cotton) is important.
